

```

// src/components/MondSymbol.jsx
// MOND currency symbol – the ₧ glyph.
// Used inline before any numeric MOND amount, like $ or £ before a number.
// Auto-adjusts stroke weight by size so it reads correctly at any scale.

import React from 'react';

/**
 * MOND currency symbol component.
 *
 * @param {number} size - Pixel size of the symbol (height). Defaults to 1em equi
 * @param {string} color - Any valid CSS color. Defaults to currentColor (inherit
 * @param {object} style - Additional inline styles, merged in.
 * @param {string} className - Optional class name.
 * @param {object} rest - Any other props forwarded to the SVG.
 *
 * @example
 * // Inline before a price (inherits parent font color and size)
 * <span style={{ fontFamily: 'IBM Plex Mono', fontSize: 28 }}>
 *   <MondSymbol size={22} /> 2,500
 * </span>
 *
 * @example
 * // Standalone, explicit color
 * <MondSymbol size={44} color="#0A0A0A" />
 */
export default function MondSymbol({
  size = 16,
  color = 'currentColor',
  style = {},
  className,
  ...rest
}) {
  // Stroke weight scales inversely with display size:
  // – At tiny sizes (≤16px), strokes need to be heavier to remain visible
  // – At hero sizes (≥48px), strokes should be lighter to stay refined
  // The viewBox is 100×100, so strokeWidth is in viewBox units.
  let strokeWidth;
  if (size <= 14)      strokeWidth = 11;
  else if (size <= 20) strokeWidth = 9;
